About

How I got here

I came to computer science when I discovered the work of Sofia Crespo, an artist who weaves together computation, art and ecology. That encounter sent me down a long path of research into different technology fields, and I realised that what truly fulfils me is studying hard problems and proposing creative solutions, something common to all of them. The challenge of entering a field I knew nothing about, and knowing it would transform the way I see the world, made the decision easy.

The present

Artificial Intelligence and Computational Vision, and everything that intersects them, from vision-language models to the architectures underneath, are what excite me most; that intersection feels like where everything I want to build converges. I am equally drawn to research and to technical leadership, guiding a team's architecture and decisions, aligning people around a problem, and turning research into something that ships. Outside of research, I am an avid reader and I am committed to social and community work. I enjoy a collaborative environment with people from different fields; I learn as much from conversation and shared experience with them as from any paper.

Where I am going

I intend to pursue a Master's degree and a PhD, and/or study whatever complementary field the project I am developing demands, while also building the experience to one day work as a tech lead. My long-term goal is to create something with genuine social and ecological impact in computer science, and to choose problems where that impact is measurable, not assumed.

Education

2024 – 2027
expected

B.Sc. Computer Science
Universidade Federal do Paraná (UFPR)

Focus on the multiple dimensions of computing, building a systemic perspective for technical specialization. Oriented toward understanding different paradigms and logic systems, from computer architecture to high-performance code optimization, rather than mastering any single language.

2024 – 2025

Training Program in Information and Communication Technology (Talento Tech-PR)
Universidade Estadual de Ponta Grossa (UEPG)

800-hour programme covering algorithms, Python, object-oriented programming, software engineering fundamentals, databases, web and mobile development, and data science/AI. Final project: developed a full technical and commercial product from scratch, a medical interoperability system addressing a critical structural problem in the Brazilian health system. Completed a complementary 160h module on Artificial Intelligence.

Experience

Feb 2026 – Present

Kinebot
Intern • AI & ML

Built a RAG based LLM pipeline from scratch: designed the retrieval and prompting pipeline end to end, curated a 50 sample evaluation dataset, and authored the quality reports used to validate it. **Refactored a legacy scoring system into a unified pipeline:** redesigned the orchestration layer that merges several sequential stages into one coherent flow, and modeled the production schema by hand as ORM models, learning to keep a mirrored schema consistent across services. **Leading applied research on extracting biomechanical measurements from video:** replaced one pose estimation approach with a more robust one, integrated a vision language model to resolve ambiguous multi person scenes, and engineered a monocular distance estimation method validated against ground truth measurements, while authoring the work as a formal research report. **Documentation practices:** organized and established a consistent pattern for research, process, and architecture documentation across the team, valuing documentation as key to both effective group work and a healthy personal work life. **Organizational competencies:** grew through structured readings, presentations, and one on one conversations with leadership. Contributed to architecture discussions for a next generation routing system inspired by a mixture of experts design. **Led a research reading and discussion club on ML, AI, and computer vision:** designed the schedule as a chronological reading of the field's most important papers, covering the perceptron, backpropagation, attention, and many other topics, and moderated open discussions where each participant brought a different source and perspective on a shared theme, such as AI and learning, ethics, and data bias.

Aug 2025 – Apr 2026

Ecomp, Empresa Júnior de Computação
Quality Assessor • UFPR

Software quality, DevOps and advanced GitHub workflows (Actions, PR review). Applied agile methodology in team leadership and organisational management.

Projects

Mar 2024 – Present

concat(Gurias)

General Coordinator • SBC • Meninas Digitais • UFPR

Led fundraising for teammates to present at a national conference. Every moth develop events for schools or the faculty members to encourage women to choose and stay in STEAM fields. Co-authored a paper nominated for Best Paper at Women in Technology (SBC WIT 2025): a statistical analysis of the project's impact on attracting women to computer science. Organised an Hour of Code for 200 students at UFPR.

2025 – Present

VRI • Computational Vision for Runners

Research project • UFPR

Lead researcher on a computer vision programme modelling runner biomechanics, designing a novel Single View Metrology method with QWEN organic lines and directing the literature review and validation architecture.

Skills

Languages	C, C++, Python, Assembly, PHP, HTML, CSS, JavaScript
AI / Vision	Machine Learning, Deep Learning, PyTorch (via Ultralytics/YOLO), Computational Vision, YOLO, QWEN (VLM), LLMs, RAG systems, MoE, OpenRouter
Research	Literature review, experimental design & validation, model benchmarking, statistical analysis, scientific/technical writing (LaTeX)
Tools	Git/GitHub, GitHub Actions, FastAPI, SQLAlchemy, Linux, REST APIs, SQL (MariaDB, MySQL, PostgreSQL), DynamoDB, AWS S3, LocalStack, Docker, pytest, Ruff, uv, Bruno
Practices	Clean Code, Unit & Integration Testing, DevOps, Agile methodologies
Soft Skills	Creative problem-solving, Effective communication, Critical thinking, Proactivity, Fast learning, Resilience, Team leadership

Languages

Portuguese	Native
English	C1 • fluent, honors student at Phil Young's
French	A2 • intermediate, self-taught and assessed by Alliance Française; aim to develop practical fluency through study abroad
Spanish	A1 • basic

Volunteering & Social Engagement

2022 – Present

Marist Volunteer

Marist Philanthropic Network

Produced educational materials for low-income public schools and ran projects with children in vulnerable coastal communities and favelas. Designed and delivered an environmental-education workshop for primary-school students during a mission in Acre (Amazônia), and participated in the third Forum on Integral Ecology. Currently training to become a long-term volunteer abroad.

2024 – Present

Founder, *Sentar à Mesa*

Independent initiative • Mesa Solidária, Curitiba

Founded and led a project providing coffee and community support to people in vulnerable situations, designing an impact-measurement framework across food security, human welcoming, and organizational sustainability; scaled to serve 200 people and mobilize 15 volunteers per month.

Publications

2025

Redes Sociais na Divulgação de uma Iniciativa por e para Mulheres na Computação

Women in Technology — SBC • Nominated for Best Paper
